Edwards Lifesciences offers small catheters that are effective in gaining temporary occlusion of blood flow in:

- Small diameter vessels such as in the distal periphery
- Operative occlusion of blood supply to specific organs, such as the kidney
- Emergency control of hemorrhage
- Vascular-neuro surgery procedures, such as carotid-cavernous sinus fistulas
- Available in three French sizes and balloon diameters

Larger 8 French occlusion catheters with inflated balloon diameters of 28 and 45 mm are ideally suited for occlusion control in:

- Aortic or cardiac hemorrhage
- Internal jugular vein hemorrhage near the base of the skull
- Operations on the lower part of the abdominal aorta and/or renal arteries to eliminate the need for extensive dissection
- Aorto-femoral bypass graft thrombectomy procedure utilizing the Fogarty graft thrombectomy catheter

(Illustration on next page)
Fogarty® Occlusion Catheters

Temporary Peripheral and Aortic Intraluminal Occlusion

Occlusion Technique for AFB Graft Thrombectomy

Thread inflated #8-22 occlusion balloon through loops of graft thrombectomy catheter
Pass uninflated occlusion balloon into aortic section of aorto-femoral bypass (AFB) graft
Inflate occlusion balloon and pass collapsed graft thrombectomy catheter into clotted area of graft
Expand graft thrombectomy catheter loops and retrieve clot while occlusion balloon remains in place
